

# Precast Modular Solutions.

RW's local and on-site manufacturing model provides an efficient and time saving method of construction for our clients. Having the modules produced adjacent to the project site also provides an increased level of communication and collaboration between RW, the Client and General Contractor as well as streamlines trade coordination. RW's preconstruction team designs a project specific manufacturing facility to meet the needs of the scope of work and satisfy inventory requirements. In addition, RW's on-site casting model ensures the quality of the modules and eliminates potential damage caused by transportation of modules over long distances.

RW's modules are produced at a project specific manufacturing facility- devoted solely to a singular project and staffed with professionals specifically assigned to that one project. The client has local and immediate access to the project team and product. Our experience has shown that clients prefer the local and on-site manufacturing model over other methods of module production.
